Blueprints lets you quickly create and test base designs that you can build inside the game of Rust to give you the best chance when playing. Fortify your base today with the unofficial rust base builder!Unlock the full version to save your base builds, and also see both the build and upkeep costs for your base plan No, not blueprints like researching items. Let's say you have a base design you like and you want to build it again. Why not be able to save/load/place the entire design and have all the blocks be "ghost blocks" that are see-through and can be swung on with a hammer and the materials in your inventory to build.That way you can download/upload/save/rebuild base designs and find out if the whole thing will fit where you want to put it. Deployables wouldn't be saved in designs, just building blocks. They'd only be visible to the team of the person who placed the design, other people don't see anything.A marketplace for bases, complete with upkeep information and optional "order to build" guides built into the block metadata would be awesome. It'd really help console newbies to be able to select "The 2x2" from a menu.It'd help me be able to design a base on a build server and deploy that sucker in the wilderness.I have 5000 hours, I know the kind of people that play this game, I know what your initial response will be, but imagine being able to dial in the perfect cave base and deploy it, or the perfect trap base, or your ideal bunker base. Never have to misplace a block again and scrap a build.Build it out as part of the console "new player tutorial" and include it in the rest of the game for us! Browse the most efficient and best value Rust bases. Solo/Duo/Trios, look no further! Browse Designs Deutsch EnglishA Rust starter base shouldn't be too big and still offer plenty of protection. Today we have a design for you that we would call the best Rust starter base in 2021! That's why the base is important: You play Rust and wonder why you are always raided? Presumably it is due to a lack of defensive lines. In today's Rust Guide we will show you one of the best 2x2 starter bases that you can pull up in no time! Contents of the guide: Basic design facts Step-by-step instructions + costs Interior Important tips Rust – Basis Guide: Basenbau leicht gemacht! The best Rust starter base in 2021! This is how you build it Why 2x2? A 2x2 base in Rust is an ideal sweet spot for newbies. Due to its small size, the base is not noticeable so quickly, is easy to upgrade and to supply maintenance materials. Apart from that, a starter base probably won't last for the entire wipe cycle anyway, but it should provide you with a solid foundation so that you have a successful start. Apart from that, any base in Rust can be easily expanded. Step by step: this is how you build your base What you need: Before we start building the best Rust starter base in 2021 — you see, I'm convinced — we should work through a short checklist. On this you will find all the materials you need for the construction: 3,000 wood 13,800 stone 5,500 metal fragments 2,086 stone for upkeep 684 metal for upkeep 1. The foundation You have found a good place to build, now you are placing the floor plan of the base made of branch foundations. This ensures that you are not within reach of another Building Cupboard. First upgrade just the inner 2x2 square to stone and drag walls and a door around it. The honeycombs outside remain free for now. 2. Expand the base Now you will create one wall on the inside so that the free area of your base has a U-shape rotated by 90 degrees. Now place three wall frames reaching out from the middle. You will need this later. You should tackle the honeycombs now. Build them straight out of stone and add a roof to them. The spike remains open because you build the airlocks here. That should make a door raid more difficult. In other words, you place wall frames in the triangular foundations and fill them with double doors (minimum metal doors). Finally, go to the roof and place stone half-walls along the lines of the inner square of your base. You build another roof on it. So you get honeycombing on the roof and have additional protection from above. Note: You should upgrade the inner area with metal fragments as soon as you can in order to get the best version of the starter base. 3. Interior & Protection Place a half-wall in the middle of the back of your base, but don't upgrading it. You build a floor on it and tear off the half wall again. Now you have increased your storage capacity. Here you can store several boxes to save space. If you do it like us, there is even room for a grill. Now you may remember the wall frames that you should have placed earlier. Add a garage door to each of them. All that remains now is the furnishing with ovens, workbenches and sleeping bags. But we leave you room for your imagination. More helpful tips for your Rust base This will help you: Our base design wouldn't be the best Rust starter base in 2021, if we didn't have helpful tips and tricks ready for you: Use carpets: hides and carpets increase the comfort level of your Rust base. The higher this is, the faster your HP regenerates. Use a locker: You can fill a locker in Rust directly with an equipment set. Should you be killed during a raid, you can equip a full armor and weapon set in no time. Expand the entrance: If you expand the front part of the base, you can attach windows with armored glass which will guarantee you an overview before you storm outside.
